

Optional Outside Air/Return Air Mixing Box with Dampers

INSTALLATION FORM RZ-NA 405-MB (Version A)
 Obsoletes Form 405-MB

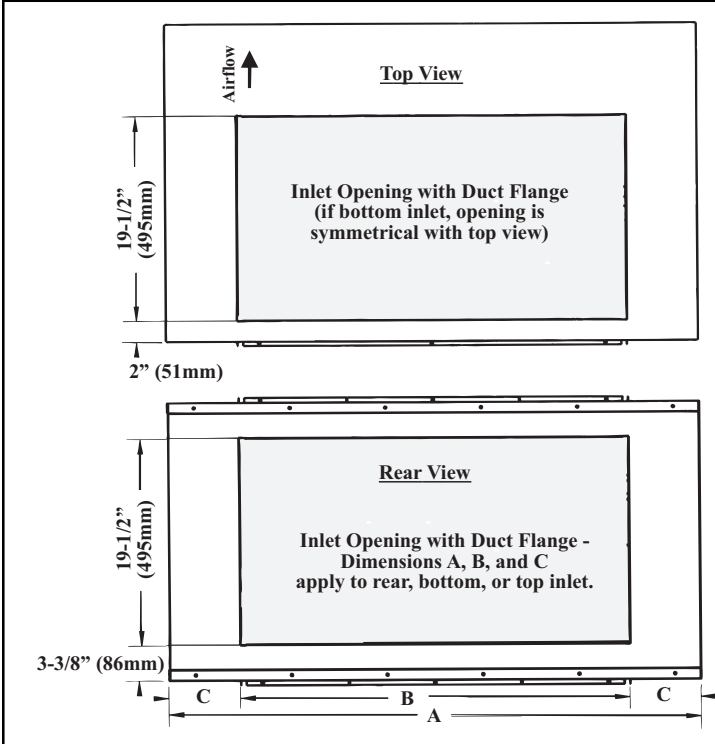

APPLIES TO: Model CAUA

Description/Application

The optional mixing box for the Reznor® Model CAUA heater is designed to provide the system with a supply air mixture of return air and outside air. (Minimum mixed inlet air temperature is 35°F/2°C.) The mixing box is available in an assortment of configurations with a selection of actuators and controls for both heating and cooling mode (for units equipped with a cooling coil). The mixing box is completely assembled at the factory for field attachment to the rear of a Model CAUA heater. It is recommended that the furnace be in its final location before attaching the mixing box.

All mixing box inlet air openings have duct flanges for attachment of ductwork. Removable door panels provide for filter access from either end of the cabinet. If the box was ordered with filters (Option AW9 or AW11), it is shipped with the filters installed. (For replacement filter sizes, see page 4.)

Mixing Box Dimensions

Airflow Configurations

The optional mixing box is available in a variety of configurations to match the installation. Your mixing box attaches to the rear of the heater in one of these airflow configurations.

Option Code	Opening for Outside Air		Opening for Return Air	
	Location on Mixing Box	Includes Dampers	Location on Mixing Box	Includes Dampers
GA1	Top	Yes	Bottom or Rear	No
GA2	Rear	Yes	Top or Bottom	No
GA3	Bottom	Yes	Top or Rear	No
GA4	Bottom	Yes	Rear	Yes
GA5	Bottom	Yes	Top	Yes
GA6	Rear	Yes	Top	Yes
GA7	Rear	Yes	Bottom	Yes
GA8	Top	Yes	Rear	Yes
GA9	Top	Yes	Bottom	Yes

Figure 1 - Mixing Box Dimensions - inches (mm)

Size	150-200		250-400	
	inches	mm	inches	mm
*A	38	965	50	1270
*B	22	578	36-1/2	927
*C	7-5/8	194	6-3/4	171

*Dimensions apply when inlet is located on top, bottom, or rear of box.

Installation Instructions

Installation should be done by a qualified agency in accordance with the instructions in this manual and in compliance with all codes and requirements of authorities having jurisdiction. It is recommended that the heater be placed in its permanent location before attaching the mixing box.

- Cut Out Air Inlet Opening (See Figure 2, page 2)**
 On the rear of the heater where the mixing box cabinet is going to be attached, find four embosses in the metal panel. These em-

bosses are corner indicators for the inlet air opening. Using tin snips or aviation shears, carefully cut straight lines between the corner marks until the opening is created.

CAUTION: The cut edges of the metal cabinet will be sharp.

Installation Instructions (cont'd)

1. Cut Out Air Inlet Opening (cont'd)

Figure 2 - Dimensions of inlet air opening to be cut out on rear of heater - inches (mm)

Opening must be cut out; follow instructions on page 1.

CAUTION: The cut edges of the metal cabinet will be sharp.

Size	D
150/200	33" (838mm)
250/300/350/400	45" (1143mm)

2. Drill Holes in the Heater Rear Panel (See Figure 3)

On the rear of the heater, drill the 1/8" holes as illustrated.

Figure 3 - Reference drawing for drilling 1/8" holes in the REAR of a Model CAUA heater when installing an optional mixing box

CAUA Sizes	A		B		C
	inches	mm	inches	mm	
150 - 200	3	76	8	203	No. of Holes
250 - 400	2-1/2	64	9	229	6

3. Select Return Air Location - Mixing Boxes with only Outside Air Dampers (no dampers in return air opening) - Options GA1, GA2, and GA3

The mixing box was manufactured with an outside air opening with dampers in either the top, rear, or bottom. There are two openings for return air allowing for a choice of location. When shipped, one return air opening is left open and the other covered. Depending on the installation, the cover may be in the correct position or it may need to be moved. If the cover needs moved, remove the screws, position the cover over the return air opening that will not be used, and attach using the same screws.

Installation NOTE: Depending on which return air opening is being covered, you may want to wait to re-attach the cover after the mixing box is attached in Step 4.

4. Attach the Mixing Box

On the rear of the heater, remove the row of screws along the bottom (save the screws).

Position the mixing box against the rear of the heater. If installing a mixing box with two dampers, remove one or both access panels on the ends of the box. If only one damper, reach through the return air opening or remove end panel(s). Reaching inside the mixing box, replace the screws attaching the bottom edge of the mixing box to the heater.

Using the holes drilled in Step 2, attach both sides and across the top with the sheetmetal screws provided.

5. Adjust the Damper Linkage - Applies to Mixing Boxes with both Outside Air and Return Air Dampers (Options GA4, GA5, GA6, GA7, GA8, and GA9)

Both dampers are closed for shipping. The linkage for the return air damper must be adjusted prior to use. Follow instructions to adjust damper linkage.

Adjust Damper Linkage:

- 1) Remove the access panel on the end of the mixing box where the damper controls are located.

- 2) Loosen the setscrew on the return air damper rod at the damper arm.
- 3) Manually open the return air dampers. While the dampers are opening, the damper rod and arm will automatically move to its correct position.
- 4) Tighten the setscrew.
- 5) Replace the end panel.

6. Connect the Damper Motor Wires

Wiring depends on the motor and control options selected. See explanation of damper controls below.

Wiring Instructions:

- 1) Remove the door panel on the front of the heater. Run the wires from the damper motor into the heater cabinet, up past the side of the burner box (the same side as the blower motor wires), and into the control compartment.
- 2) Follow the wiring diagram with the heater and attach the wires to the terminals indicated.
- 3) Replace the heater door panel.

Installation of the optional mixing box is complete. Follow the instructions in the heater installation manual (Form RZ-NA 405) to complete the installation of your heater.

Attach the outside air ductwork to the duct flange on the outside air inlet of the mixing box. If the system includes return air ductwork, attach it to the duct flange on the return air inlet. To reduce noise transmission, use of a flexible duct boot to attach ductwork is recommended. Ductwork must be supported; do not rely on the mixing box to support the ductwork.

On startup, check for proper operation of the damper motor and controls.

Damper Controls - In all cases when the unit shuts down, the outside air damper closes.

IMPORTANT NOTE - Mixed Air Temperature Limit : The Model CAUA is designed for a maximum temperature rise of 75°F. Above 35°F (2°C) outside air temperature, any percentage of outside air is permitted. For optimum operation and to prevent condensation, the mixed air temperature going to the heat exchanger must not be below 35°F (2°C). When using a unit with outside air dampers, means must be provided that the mixed air temperature does not drop below 35°F (2°C). This can be accomplished with either a mixed air controller or by manually adjusting the return air dampers so that they will never completely close.

Control Matrix

Mixing Box Options		Actuator	Control(s)			
GA1, GA2, GA3	Outside Air Damper only	GB2	None (std)			
			GC3C			
			GC3C	GC4		
GA4, GA5, GA6, GA7, GA8, GA9	Both Outside Air and Return Air Dampers	GB2	None (std)			
			GC3C			
			GC3C	GC4		
		GB3	GC1A			
			GC1A	GC3A		
			GC1A	GC4		
			GC1A	GC3A	GC4	
			GC1B			
			GC1B	GC3A		
			GC1B	GC4		
			GC1B	GC3A	GC4	
			GC3A			
		GC3A	GC4			
GB4	GC3B					
	GC3B	GC4				

Description

MOTORS	
Option	Description
GB2	2-position damper motor
GB3	Modulating damper motor
GB4	Modulating damper motor for use with proportional enthalpy control only
CONTROLS	
Option	Description
GC1A	Potentiometer on mixing box
GC1B	Remotely located potentiometer
GC3A	Mixed air temperature controller, heating only
GC3B	Dual setpoint modulating enthalpy control for heating and cooling, use with GB4 only
GC3C	2-position enthalpy control to use with 2-position damper motor, cooling only
GC4	Senses return air temperature to delay opening of outside air damper providing warm up or cool down time

Damper Controls (cont'd)

Control Application (cont'd)

Mixing Box Option	Motor Option	Control Option(s)	Description	Operating Mode	Application
GA1, GA2, GA3, GA4, GA5, GA6, GA7, GA8, and GA9	GB2	None	2-Position Damper Motor	Heating only or Heating and Cooling	When the unit is operating, the outside air damper is open.
		GC3C	2-Position Damper Motor with 2-Position Enthalpy Control	Cooling only	To minimize cooling energy consumption and equipment cycling, when the sensor detects a low enthalpy (heat content in a lb of air) in the outside air, the control will open the outside air damper. When the control senses a high enthalpy in the outside air, the control will close the outside air damper. Factory setpoint for opening the outside air damper is 75°F/40% humidity.
		GC3C and GC4			Same as above (GC3C only) plus a delay based on return air temperature. Control delays the opening of the outside air damper to provide faster cool down of the supply air.
GA4, GA5, GA6, GA7, GA8, and GA9	GB3	GC1A or GC1B	Modulating Damper Motor with Manual Potentiometer Mounted in the Mixing Box (GC1A) or Remote (GC1B)	Heating only or Heating and Cooling	To control mixture of inlet air, manually set the potentiometer to the desired minimum position of the outside air damper. (See IMPORTANT NOTE on page 3 to determine if minimum mixed air temperature applies.)
		GC1A or GC1B with GC3A			Same as above (GC1A or GC1B only) plus in heating mode the dampers are modulated in response to a control sensing the mixed inlet air temperature. The adjustable control has a range of 0-100°F; factory setpoint is 35°F.
		GC1A or GC1B with GC4			Same as above (GC1A or GC1B only) plus a delay based on return air temperature. Control delays the opening of the outside air damper to provide faster cool down (cooling mode) or warm up (heating mode) of the supply air.
		GC1A or GC1B with both GC3A and GC4			Includes all of the control functions listed in this section - a potentiometer (GC1A or GC1B) with both the mixed air controller (GC3A) and the delay (GC4).
	GC3A	Modulating Damper Motor with Mixed Air Controller	Heating only	Dampers are modulated in response to a control sensing the mixed inlet air temperature. The adjustable control has a range of 0-100°F; factory setpoint is 35°F. (See IMPORTANT NOTE on page 3 to determine if minimum mixed air temperature applies.)	
				Above plus a delay based on return air temperature. Control delays the opening of the outside air damper to provide faster warm up of the supply air.	
GC3B	Modulating Damper Motor with a Logic Module and Dual Setpoint Modulating Enthalpy Control	Cooling and Heating	In cooling mode, damper modulation is controlled by a modulating enthalpy control. With one sensor measuring the enthalpy of the outside air and another sensing the return air, dampers will modulate in response to the control to maintain the most economic mix in the inlet air (normally set to maintain between 50-56°F). With two enthalpy setpoints, damper operation can be interlocked with a time clock or other device to provide different mix depending on occupancy or other determining factor. In the heating mode, damper modulation is controlled by a mixed air temperature sensor. (See IMPORTANT NOTE on page 3 to determine if minimum mixed air temperature applies.)		
			Above (GC3B only) plus a delay based on return air temperature. Control delays the opening of the outside air damper to provide faster cool down (cooling mode) or warm up (heating mode) of the supply air.		

Replacement Filters

When filters need replacing, use the following sizes:

CAUA Size	150-200		250-400	
Filter Type/Size	Qty	P/N	Qty	P/N
2" Pleated, Disposable				
16x16	2	104109	6	104109
16x20	2	104110	--	
2" Permanent, Aluminum				
16x16	2	104103	6	104103
16x20	2	101620	--
