

# FINALLY, A CURE FOR THE “COMMON COLD” GARAGE

**REZNOR®**

## RESIDENTIAL GARAGE HEATERS

From the World's Oldest and Largest Manufacturer of Gas Unit Heaters

### WHY HEAT YOUR GARAGE?

- You can reduce car engine wear and tear caused by cold starts
- Store paint and other chemicals safely without threat of freezing
- Your outdoor plants and pets can survive winter storms while you maintain a clean/orderly home
- Keep your children and infants warm while transferring from home to car
- Avoid having to let your car idle to let it warm up:
  - Reduces fuel usage
  - Reduces risk of Carbon Monoxide build-up in garage and home
- Maintain your garage either at comfortable working/living temperature or just above freezing
- Other things you can do in a heated garage all winter:
  - Practice golf swing or other sports
  - Let your kids play
  - Have a kids' party
  - Exercise
  - Polish your car or engine repair
  - “Shop” type hobbies
  - Play musical instruments
  - Other “loud” activities

## RESIDENTIAL GARAGE HEATERS

Keep your garage warm and comfortable through the coldest winter months.

Features	Benefits	Model FT	Model SFT
Low Profile	Compact design reduces overhead obstruction, allowing for more headroom than conventional unit heaters	X	X
Versatile Installation	Unit can be flipped for convenient installation or placement	X	
Separated Combustion	Air for combustion is drawn through a flue pipe from the outside*		X
Spark Ignitor - No Standing Pilot	When thermostat calls for heat, the ignitor sparks as the gas flow starts. This avoids the need for a standing pilot which could be blown out when a garage door is open.	X	X
Power Vented	A small blower is used to force exhaust gases through the flue. This makes the heater more efficient.	X	X
Horizontal or Vertical Flue Venting	The flue which vents the exhaust gases can be run vertically through the ceiling/roof in the traditional method. It can also be run horizontally through a side wall when vertical venting is not practical (For example: When there is living space above the garage).	X	X
Separate Wall Thermostat	The garage heater can be operated independently from the home furnace by a separate thermostat mounted in the garage.	X	X
Multiple Fuels	Heaters can be operated on Natural Gas or Propane Gas	X	X
Aluminized Steel Heat Exchanger	Heating elements in the units are designed to provide long life. Heat exchangers are backed by a 10 year non-prorated warranty (parts only, see limited warranty form for complete details).	X	X
Integrated Circuit Board with LED Diagnostic Indicator Light	Designed to assure safe reliable operation and easy maintenance	X	X
Approved for Installation in Residential Garages	IAS (U.S.A.)	X	X
	CSA (Canada)	X	X

\* Model SFT uses outside air/oxygen for combustion inside the heater. Keeping the flame separate from air in the garage is very important if you plan on woodworking, stripping paint, refinishing furniture, or storing certain chemicals in the garage.
